

ABSTRAK

Penelitian ini menggunakan model deskriptif dengan desain penelitian *One Shot Case Study* dengan berusaha menggambarkan objek atau subyek yang diteliti sesuai dengan apa adanya sehingga akan di dapat penerapan pada objek yang diteliti. Penelitian ini menggunakan responden sebanyak 32 siswa dalam pembelajaran kooperatif *snowball throwing* pada materi luas dan keliling segitiga. Dari hasil belajar siswa menggunakan pembelajaran kooperatif *snowball throwing* yaitu: Siswa mampu menjalani tahapan-tahapan pembelajaran menggunakan model pembelajaran kooperatif tipe *snowball throwing* tanpa adanya hambatan dan ketuntasan tes hasil belajar siswa adalah seluruh siswa yang ada di kelas dinyatakan belum tuntas mengikuti pembelajaran menggunakan model pembelajaran kooperatif tipe *snowball throwing* hal ini disebabkan oleh siswa yang belum tuntas masih diatas 20% dari jumlah siswa.

Kata Kunci : Pembelajaran Kooperatif, *Snowball Throwing*, Segitiga

ABSTRACT

This research uses a descriptive model with a One Shot Case Study research design by trying to describe the object or subject being studied according to what it is so that it can be applied to the object being studied. This research used 32 students as respondents in snowball throwing cooperative learning on the topic of area and perimeter of triangles. From the results of students' learning using snowball throwing cooperative learning, namely: Students were able to go through the stages of learning using the snowball throwing type of cooperative learning model without any obstacles and the completion of the student learning results test was that all students in the class were declared to have not completed learning using the cooperative learning model This type of snowball throwing is caused by incomplete students who are still above 20% of the total number of students.

Keywords: Cooperative Learning, Snowball Throwing, Triangle
