CHAPTER V

CONCLUSION AND SUGGESTION

This chapter deals with the conclusion, implication of the research findings, and some suggestions regarding the findings for the Implementation of Extensive Reading through digital media to improve students' vocabulary in junior high school.

5.1 Conclusion

Based on research findings and discussion, the researcher concluded that implementing extensive reading using digital media can increase students' vocabulary in Class VIII MTS MA'ARIF Pamotan. to answer the first problem formulation. Before implementation, students' vocabulary was assessed as basic or low. It is known that students generally have limited vocabulary; this is proven by the students' pre-test scores. From the pre-test results, the maximum student score was 80, the minimum was 48, the student's mode score was 58, and the N-Gain value was 17.75%. It can be concluded that the students' vocabulary level is low. to answer the second problem formulation. The implementation process involves integrating digital media into a broad reading curriculum. This includes the use of the Lets Read app, which can be accessed offline and is designed to engage students more effectively than traditional reading methods. Digital media using the Let's Read application provides a variety of interesting and easily accessible reading materials, helping to maintain student motivation and involvement. and to answer the third problem formulation. After the implementation period,

students' vocabulary levels were assessed again. These findings show a significant increase in students' vocabulary. This is proven by the students' post-test scores: the student's lowest score was 61, the highest was 89, and the N-Gain score was 44.80%. It can be concluded that the student's score increased. Extensive reading through digital media not only increases students' vocabulary knowledge but also improves students' ability to understand and use new vocabulary in context. The study concluded that the use of digital media for extensive reading is an effective approach to increasing vocabulary among junior high school students. Digital media offers diverse and interactive content that can cater to different learning styles and preferences, making vocabulary learning more engaging and effective. By giving students more opportunities to discover and use new words in a variety of contexts, digital media can significantly increase their vocabulary acquisition.

5.2 Suggestions

Regarding the results of research at MTS Ma'arif Pamotan Porong, it is recommended that English teachers consider using Extensive Reading using digital media in their teaching so that students are interested in reading and improve student vocabulary.

5.2.1 MTS Ma'arif Pamotan English Teacher.

Based on the success of implementing extensive reading, it is hoped that English teachers have to be creative and innovative in teaching by choosing English reading materials that can help improve students'

understanding. Providing variety of readings that suit students' interests and ability levels, as well as using interactive applications or digital platforms can increase student engagement and motivation.

5.2.2. Students majoring in English Education.

The results of this research are important for college students of English education as a reference in using extensive reading with digital media. Material that is varied and gradual according to students' competency levels is very useful for improving the quality of skills taught. This inspires them to develop and use a variety of interesting materials to improve the quality of language teaching.

5.2.3 Other Researchers.

This research can be used as a reference in variety and gadual material suitable. There are many other experiments that can be carried out to improve the process of teaching and learning skills through interesting activities. Other researchers can apply this experiment in other classes and use various other interesting activities to improve students' vocabulary. Regular monitoring and evaluation is also important to assess the effectiveness of the method and make adjustments if necessary.
